

Randy Hansen

Candidate statement

I am the Deputy Laboratory Director for Operations and Chief Operating Officer at Pacific Northwest National Laboratory (PNNL). With over three decades of experience, I oversee overall lab operations. My experience builds on my varied experiences from a watchstander with Westinghouse, to entry level scientist with PNNL, to private sector experience with Bristol-Meyers Squibb. These experience set the foundation for my successive levels of scientific and operational leadership in the subsequent decades.

This is a unique time, and I believe EFCOG can have a outsized impact helping to refine how the Department of Energy delivers on its critical missions. The ability of EFCOG to organize and galvanize the community is well established. I look forward to being a innovative voice that helps to define the focus for EFCOG to be a productive and effective partner to the Department. The Department is key to a number of the Nation's most important priorities. As a COO at at an Office of Science laboratory, I look forward to working across the complex to optimize operations and delivery of mission.
