

## **Draft Candidate Statement – EFCOG Membership**

### **Carla Cernigliaro - Leidos**

I am pleased to be considered for participation in EFCOG and to engage with the broader contractor community supporting the Department of Energy mission.

Across my roles at Leidos, I have supported programs aligned to the DOE and NNSA mission, with a focus on disciplined operations, workforce performance, and delivery in highly regulated environments. I have led and deployed teams of thousands of employees and contractors in support of nuclear security, environmental management, and site operations, and have engaged at the governance level through joint venture boards, including Consolidated Nuclear Security and Hanford Mission Integration Solutions.

While at Leidos, I have supported programs advancing nuclear security, infrastructure modernization, environmental stewardship, and digital transformation. These efforts require close collaboration across contractors and government organizations to improve efficiency, share best practices, and responsibly manage risk while delivering measurable results. This experience has reinforced the importance of strong operational performance, cybersecurity resilience, and effective collaboration across the enterprise – areas that align closely with EFCOG’s Operations and Cybersecurity working groups and broader mission priorities.

I believe EFCOG provides a valuable forum for strengthening communication across the DOE complex and advancing practical solutions that enhance safety, performance, and mission success. I look forward to contributing to the EFCOG community and supporting continued collaboration across the energy enterprise.
