

Mike Rinehart
Kiewit Nuclear Solutions Co.

“I am honored to be considered for a position on the EFCOG Board of Directors. Over the past year, my commitment to advancing safety, operational excellence, and collaborative solutions across the DOE/NNSA complex has only strengthened.

Throughout my career, I’ve been passionate about building strong teams and delivering complex projects safely, efficiently, and with measurable results. As President of Kiewit Nuclear Solutions, I’ve had the privilege of helping grow a team focused on innovation, alternative delivery models, and cross-industry collaboration—work that positions us to support EFCOG’s mission more effectively than ever.

By applying lessons learned we deliver, innovative solutions that enhance project delivery and align with DOE processes. From our recent work at WIPP, Y-12, LBNL, SRS and INL, I am able to bring DOE enterprise observations to the forefront of infrastructure to improve delivery and support of the EFCOG initiatives.

EFCOG’s strategic focus this year—on risk-based approaches, increased efficiency, workforce development, and leveraging digital tools and technology for future mission execution—reflects the areas where collective industry engagement can have the greatest impact. These priorities, including streamlined operations and enhanced knowledge sharing across subject matter working groups, are essential as we confront complex challenges from project delivery to cybersecurity and supply chain resiliency.

If elected, I will bring a practical, field-focused perspective and a deep commitment to operational excellence that aligns with EFCOG’s emphasis on continuous improvement and cross-industry partnership. I am particularly energized by opportunities to support workforce development initiatives that strengthen our talent pipeline and to champion the adoption of digital and risk-informed practices that drive tangible performance gains.

It would be an honor to contribute to EFCOG’s ongoing efforts and serve alongside this incredible community as we advance operational excellence and mission success across the DOE complex.”
