

CPIM + INECP one/sliders + DOJ – Can we ISD this course?

We need a high-level enforcement activity that speaks to key functions and whole-of-gov approach

eCIT outputs have not been ISDed. Can we do something about that?

We want to salvage the ASCOT commodity modules. We use them. We need them.

Can we have a rule that the team only pulls commodity information/slides ONLY from eCIT?

Can the new IT system update control language or help with that process?

Can we have easier access to eCIT commodity printed slides that are updated regularly – or auto pdfs.

Do we need to ISD domestic or Proliferation Awareness or JFO or CPIT or iJFO work?

Commodity Training is still in demand from licensing and enforcement audiences. We should use a JTA to ISD process and understand demand.

We need a seminar on political will to uplift the role of EC.

We need curriculum for a classic EO with an industry audience.

We need to make a team decision on what is legacy and what is or is not being maintained/kept up to date – like the Proliferation Threat module.
