# Implementation of a Graded Approach to the Apparent Causal Analysis Process

Sharese Addison SRNS Causal Analysis Program Manager

EFCOG Spring Meeting – CAS Sessions – May 2-3, 2023 SRNS-MS-2023-00143

- 1. Previous State of the Causal Analysis Program
- 2. Catalyst for Change
- 3. How Did We Start?
- 4. Change Preparation
- 5. How does the ACA Graded Approach Process work?
- 6. Supporting Objectives
- 7. Accomplishments

- The Causal Analysis Process was not being performed in a timely manner.
  - In 2021, there were 45 Causal Analyses performed which closed in an average of 74 days.
  - In 2022, there were 51 Causal Analyses performed which closed in an average of 67 days.
- There was an insufficient number of Qualified Causal Analysts to lead the Causal Analysis Processes.
  - As of January 2022, there were 15 Qualified Causal Analysts to lead Causal Analyses across the site.

- There are no designated roles to support the Causal Analysis Process.
  - The Qualified Causal Analysts are performing the causal analyses in addition to their job functions.
- The Causal Analyst's Qualification Process was lengthy.
  - As of January 2022, the average time to complete the qualification process was 16 months.
- The documentation of Apparent Cause Analyses performed for Equipment Failures was not consistent.

It was identified during a Board of Directors review of the Contractor Assurance System that "SRNS should allow for simplified Causal Analysis techniques to be used where appropriate and reserve the use of more sophisticated Causal Analysis methods (e.g., BlueDragon<sup>®</sup>) for only the highly complex events when required by the event categorization".

Benchmarking of the Idaho National Laboratory's (INL) Risk-Based Approach to Cause Analysis:

- Reached out to over 25 DOE facilities and field offices to help identify best practices in Apparent Cause Analysis.
- Used a modified version of the Nuclear Energy Institute's guidance on risk-based approach to cause analysis.
- Developed a process that offers a true graded approach to cause analysis which was implemented in August 2022.

# **SRNS**

The Graded Approach to the Apparent Cause Analysis (ACA) process starts with a focused conversation.

Recognize that often, a good understanding of the Apparent Cause of an event occurs during the Issue Investigation meeting, also referred to as the data gathering stage of the investigation.

# **SRNS**

For well-defined, non-complex issues, the Issue Investigation process and associated Causal Analysis can effectively identify and document Apparent Causes and corrective actions to prevent recurrence.

The implementation of the Graded Approach to Apparent Cause Analysis streamlines the process.

When there is a need to complete an Apparent Causal Analysis, the Responsible Manager (RM) may elect to proceed by performing, at minimum, one causal analysis method and documenting using the Formal Causal Analysis Report.

## -OR-

Alternatively, the RM may elect to proceed by using the *Consequence and Cause Uncertainty Guidance* to determine the level of analysis necessary for the ACA, or Graded Approach.

### The Consequence and Cause Uncertainty Guidance is

based upon an understanding of the *consequences* (or potential consequences) of the Issue versus the *uncertainty* of cause. It is used to determine what causal analysis approach should be used to perform the ACA of the Issue.

### **Consequence and Cause Uncertainty Guidance**

		Cause Uncertainty				
		Cause is Clear	Cause is Uncertain			
Consequence	Low (Marginal/ Negligible)	<ul> <li>Complete the Apparent Causal Analysis Determination Initial Assessment Form.</li> <li>Identify and document causal codes from the DOE Causal Analysis tree in the STAR CTS Record.</li> <li>Document using the Issue Investigation Report, if necessary.</li> <li>The Formal Causal Analysis Report is not necessary.</li> </ul>	<ul> <li>Complete the Apparent Causal Analysis Determination Initial Assessment Form.</li> <li>Document using the Apparent Causal Analysis Questionnaire.</li> <li>The Formal Causal Analysis Report is not necessary.</li> </ul>			
	Medium (Significant)	<ul> <li>Complete the Apparent Causal Analysis Determination Initial Assessment Form.</li> <li>Document using the Apparent Causal Analysis Questionnaire.</li> <li>The Formal Causal Analysis Report is not necessary.</li> </ul>	<ul> <li>Complete the Apparent Causal Analysis Determination Initial Assessment Form.</li> <li>Perform one causal analysis method (The Apparent Causal Analysis Questionnaire may be used if applicable).</li> <li>Document the results on the Formal Causal Analysis Report.</li> </ul>			
	High (Crisis/Critical)	<ul> <li>Perform one causal analysis method (Apparent Causal Analysis Questionnaire shall not be used).</li> <li>Document results on the Formal Causal Analysis Report.</li> </ul>	<ul> <li>Perform one causal analysis method (Apparent Causal Analysis Questionnaire shall not be used).</li> <li>Document results on the Formal Causal Analysis Report.</li> </ul>			

**S**RNS

The Responsible Manager uses the information gathered in the initial stages of Issue Investigation and the *Consequences and Cause Uncertainty Guideline* to provide a recommended approach to proceed with the Causal Analysis. The recommendation is documented on the *Apparent Causal Analysis Determination Initial Assessment Form*.

The recommended approach for use should be approved by the Causal Analysis Program Manager or Designee prior to proceeding with the Causal Analysis. It is recommended to obtain this approval within 10 working days from the Issue's date of discovery.

- If approval is not obtained by the Causal Analysis Program Manager, further analysis of the Issue will be performed by performing, at minimum, one Causal Analysis method and documenting using the Formal Causal Analysis Report.
- All documentation (Forms and/or Reports, as applicable) will be attached to the appropriate Issue Documentation Record after they are completed and approved.
- To meet established performance metrics for the customer, the Causal Analysis process is to be completed within 45 calendar days from the date of discovery of the Issue.

Three standardized forms were created for use in this process:

- The <u>Apparent Causal Analysis Determination Initial</u> <u>Assessment</u> form is used to document the recommended approach to proceed with the Causal Analysis.
- The <u>Apparent Causal Analysis Questionnaire</u> form is used for causal analysis documentation when approved for the graded approach.
- The Equipment Failure Engineering Evaluation is used for standardized documentation of causal analyses performed for equipment failures that are ORPS reportable.

A focused effort was placed on increasing the number of Qualified Causal Analysts and reducing the cycle time for completing the qualification process.

- The Causal Analysis Program Owner coordinated registering site employees for third-party Blue Dragon® Training.
- Individual practical participation in Causal Analysis events were also coordinated.

As of March 2023:

- The cycle time for Causal Analyst Qualification has reduced from 16 months to 4 months.
- The number of qualified Causal Analysts has increased from 15 to 29.
- The average cycle time for Causal Analyses steadily decreased during 2022. Currently, the average time from the date of discovery of an Issue to its closure has reduced from 67 days (FY2022 avg) to 44 days (FY2023 avg - to date).

#### Accomplishments

#### INNOVATION • DEFENSE NONPROLIFERATION • ENVIRONMENT

#### Savannah River Nuclear Solutions We make the world safer.

# The Apparent Causal Analysis Determination Initial

**Assessment** form documents the following:

Part A: Identifying Information and Problem Statement

Part B: Apparent Causal Analysis Approach as determined by the *Consequences and Cause Uncertainty Guideline* 

Part C: Approval of Apparent Causal Analysis Approach

Part D: Apparent Causal Analysis Initial Assessment Signatures

# The **Apparent Causal Analysis Questionnaire** form documents the following:

Part A: Identifying Information and Problem Statement

Part B: DOE Causal Analysis Tree (CAT) Node Questions

Part C: Node Determination

Part D: Cause(s)

Part E: Extent of Condition Evaluation

Part F: Apparent Cause Analysis Questionnaire Signatures

# The Equipment Failure Engineering Evaluation form

standardizes the documentation of equipment failures and ensures that the complete causal analysis is performed consistently. It documents the following:

- Part A: Failed Equipment Description
- Part B: Failure Scenario
- Part C: Analysis
- Part D: Results
- Part E: Corrective Actions
- Part F: Concurrence
- Part G: Approvals

2) If applicable, proceed with using OSR 28-216 to document the identified apparent causes and corrective actions. Alternatively, the DOE CAT Codes (to the C Level) and corrective actions may be entered directly into the associated STAR Record.

#### Apparent Causal Analysis Questionnaire

Proc. Ref. 22Q-CA-1

A completed copy of OSR 28-215, Apparent Causal Analysis Determination Initial Assessment, must be attached to this for	m.
Part A: Identifying Information and Problem Statement	
Provide identifying information and problem statement.	
STAR CTS Tracking Number	
Issue Topic/Description	
Problem Statement (NOTE The problem statement should be concise, one to two sentences, and contain the "who, what, when, whe consequence [actual and potential]" elements.)	ere, and
Apparent Causal Analysis - Apparent cause is the most probable cause that can "reasonably be identified" that explains why the is local/facility management has "the control to fix" and for which effective recommendations for corrective actions to remedy the issue Identify all reasonable apparent causes consistent with the issue/event.	sue happened that can be generated.
Part B: DOE Causal Analysis Tree (CAT) Node Questions	
Answer the following questions for each DOE Causal Analysis Tree (CAT) Node. Answer N/A if the question is not applicable.	
DOE CAT Node A1 - Design and/or Engineering Problems	Yes, No, or N/A
<ol> <li>Was the design/engineering (e.g., facility, equipment, calculations) performed without a defect or flaw in design or other factors related to configuration, engineering, layout, tolerances, calculations, ergonomics, etc?</li> <li>NOTE If the answer is NO, care must be taken to eliminate worker error as the cause of the design or engineering before this is designated as a cause.</li> </ol>	
Comments to Support Node A1 Assessment	
DOE CAT Node A2 - Equipment and/or Material Problems	Yes, No, or N/A
<ol> <li>Did the material/equipment function normally, without failure, malfunction, or deterioration of equipment or parts, including instruments or material? (Consider calibration, maintenance, material control, procurement control, and/or defective or failed material or equipment.)</li> </ol>	
NOTE If the answer is NO, care must be taken to eliminate worker error as the cause of the failure or malfunction before this is designated as a cause.	
Comments to Support Node A2 Assessment	
DOE CAT Node A3 - Human Performance Less Than Adequate NOTE Node A3 requires a couplet that cannot be another A3 code.	Yes, No, or N/A
1. Did the worker follow the procedure?	
2. Did the worker understand the work to be done?	
3. Did the worker stop when unsure about the task?	
4. Did the worker follow posted instructions or warnings?	
5. Did the worker follow verbal directions from supervisor?	
6. Was the worker physically and mentally capable of performing work?	
Comments to Support Node A3 Assessment	

#### OSR 28-216 (Rev. 02-07-2023) Page 2 of 4

#### Apparent Causal Analysis Questionnaire (Continued)

	Proc. Ref. 22Q-CA-1
DOE CAT Node A4 - Management Problems	Yes, No, or N/A
1. Did the supervisor properly communicate and enforce expectations?	
2. Was the supervisor aware of the status or changes to the work?	
3. Did the supervisor provide the necessary resources to successfully complete the operation?	
4. Did the supervisor take appropriate action(s) to ensure an adequate and secure environment existed for the operation?	
5. Did the supervisor provide adequate emphasis on safety and procedural compliance?	
6. Was the job scoping and planning adequate?	
7. Did the supervisor properly manage any changes in the work activity?	
8. Did the supervisor/manager effectively manage changes to the program, process, or procedures?	
Comments to Support Node A4 Assessment	
DOE CAT Node A5 - Communications Less Than Adequate	Yes, No, or N/A
1. Was there an approved written instruction (e.g., TWD, WP, procedure) in existence for the work taking place?	
2. Was the procedure available to the workers?	
3. Was the procedure sufficiently detailed to enable a qualified worker to perform the task with minimal supervision?	
4. Was the procedure easily understood with required actions clearly stated?	
5. Did the procedure contain a sequence of action steps which conformed to the normal or expected operational sequence?	
6. Was verbal communication adequate (shift communication and between work groups)?	
DOE CAT Node A6 - Training Deficiencies	Yes, No, or N/A
1. Was formal training required for the process(es) implicated in the problem or event statement?	
2. Did the training provide adequate hands-on experience or practice prior to actual task performance?	
3. Did the training included all knowledge or skills for the worker to perform the task?	
4. Was refresher training provided at appropriate intervals?	
5. Did the training presentation and materials support adequate instruction?	
6. Was the worker required to attend the training before assignment to duties requiring task performance?	
Comments to Support Node A6 Assessment	
DOE CAT Node A7 - Other Problems	Yes, No, or N/A
1. Was the event or condition the result of external phenomena (e.g., weather, power failure, fire, explosion, or natural phenomena)?	
2. Was the event or condition the result of legacy contamination or an unknown radiological or hazardous material source?	
3. Was the event or condition the result of a legacy issue not related to radiological or hazardous materials? Comments to Support Node A7 Assessment
